

SRM Vertical Mouse VS5 Right - Wired - Silver / Black

The contents of the box include:

- The mouse itself
- Large palm rest
- Small palm rest
- 3 coins

The SRM 5 vertical mouse from ErgoLine is adjustable in weight and has 2 detachable palm rests for regular and precision work.

Once the mouse has been taken out of the box, you can plug and play the USB cable into a USB port. After this, you have to switch the switch "ON / OFF" to "ON" at the bottom of the mouse, after which it is ready for use.

With the 2 extra buttons (apart from the normal mouse click buttons) you can make working even more efficient by linking to them another function. From the factory setting, the bottom button on the right is "forward" and the small button on the left is "backward", but you can change and set these functions yourself via www.minicute.com

The DPI can be set by pressing the DPI button on the bottom of the mouse. It blinks red once at 800 DPI, green at 1200 DPI, blue at 1600 DPI and yellow at 2000 DPI.

Use of the coins

Using the coins You can put the coins in the holder next to the batteries to add weight to the mouse. If you leave it out, the mouse will feel very light. The coins ensure that you can find the ideal personal balance. These increase the user comfort.

Ergonomic use of the mouse

By means of the included palm sets, you can rest your hand on this palm rest, which can easily be connected to the mouse by a magnetic action. It not only ensures that you experience peace and comfort from the inside of your hand, but it also protects against health problems. The neutral position of the forearm reduces muscle tension.

This mouse, when used in combination with a compact keyboard, prevents you from extending your arm or twisting the forearm. This mouse helps you to work from the wrist as little as possible, supports the forearm at an angle of 90 degrees and ensures that you can work within the width of your body. In addition, the forearms are supported by the armrests of the office chair. This prevents you from putting unnecessary strain on the large muscles around the neck area.

For optimal ergonomic efficiency, we recommend using a compact keyboard when using an ergonomic or vertical mouse.
