

SRM Vertical Mouse VS4 Silver / black (right wireless)

The contents of the box include:

- SRM Vertical Mouse VS4
- RF Dongle [in the mouse]
- 2x AAA battery

The SRM mouse (Stress Relieving Mouse - version 4 from the brand Minicute) is the fourth version in our line of success with laser-guided vertical mice, suitable for PC & Mac. The original MiniCute SRM VS4 mouse is laser controlled and has 4 buttons (2 for the index and middle finger and 1 button for the thumb) and a large scroll button with click function.

The SRM VS4 is suitable for righthanded people with a small / medium hand. This means that the hand width may be up to 8.5 cm.

The SRM VS4 comes in a box with a protective bag around it. You can provide the mouse with energy by the supplied batteries.

You can connect the mouse to the PC or laptop by means of the included RF dongle (you can find this on the bottom of the mouse, at the place where the batteries go).

By means of a plug & play system, the mouse can be used immediately after it has been fitted with the batteries and the RF dongle has been placed in a USB port of the computer.

Customize buttons

The default function of the review button (where the thumb rests) is the backward function.

However, you can change this button to another function for more efficient use in your computer's settings.

1. Launch the Microsoft Mouse and Keyboard Center
 - a. Microsoft's Mouse and Keyboard Center can be downloaded from [this](#) link [CTRL + CLICK ON THIS]
2. Select **Basic Settings**
3. Select the button you want to assign
4. In the list you can assign a command to the assigned button, if you want to disable a button, select this button **Disable**

At the bottom of the mouse you can adjust the DPI by means of the DPI button. The DPI is set to 400 DPI if the scroll button flashes red once, 800 DPI if it flashes red twice and 1600 DPI if it flashes red three times.

The mouse has a sleep mode function. This means that if this mouse is not used for more than half an hour, it will go into sleep mode to save energy. You can reactivate the mouse by simply clicking once with the right mouse button.

Incidentally, the mouse is latex-free and the scroll wheel is made of silica (no rubber).

Ergonomic use

Because the SRM VS4 is a vertical mouse, the forearm will experience less muscle tension. When using the mouse, the hand, wrist and arm are in a relaxed position. You can use this mouse as a preventive mouse for starting muscle tension complaints. The mouse has an adjustable DPI, so you can work even more focused.

The SRM VS4 offers comfort when it fits well with the size of your hand. The maximum hand width for this mouse is 8.5 cm.

The ErgoLine SRM VS4 mouse helps you to work from the wrist as little as possible, supports the forearm at an angle of 90 degrees and ensures that you can work within the width of your body. In addition, the forearms are supported by the armrests of the office chair. This prevents you from unnecessarily straining the large muscles around the neck and shoulder area.

For optimal ergonomic efficiency, we recommend using a compact keyboard when using this mouse.
